VADPROM

STEPS

We intend to explain in simple and understandable language how the project is being implemented, so everyone can easily understand at what stage the project is currently being implemented.

The VODPROM project has two components: “Construction and modernization” and “Digitization and decentralization”.

Construction and modernization is modernization of the housing and communal services (improvement of the quality of current facilities; construction of new facilities of municipal water processing and equipment manufacturing plants; introduction of high standards of corporate management).

We think that it is necessary to go through 5 steps to implement this part of the project:

1 STEP

Creating a working prototype

On behalf of the management company, we go to the regions for negotiations and coordination of joint work on the implementation of national programs.

Through the fund, any investor, any business community, any other funds can also participate in this project. National programs are implemented thanks to the partnership of our foundation and the state.

The purpose of this step is to create and implement the MVP, i.e. a working prototype based on a series of pilot projects for municipal water processing and construction of plants for the production of water treatment equipment.

Step Status: COMPLETED

2 STEP

Region definition and Memorandum conclusion

We have identified **the Republic of Uzbekistan** as the first region.

This region has the most optimal conditions for the rapid entry and implementation of the national program.

The purpose of this step is successful negotiations with the representatives of the region and the Memorandum conclusion.

Step Status: IN PROGRESS

3 STEP

Signing of the PPP Agreement

After signing the Memorandum, working groups are formed, the purpose of which is to resolve issues and sign a PPP Agreement.

The purpose of this step is to sign a PPP Agreement.

Step Status: IN QUEUE

4 STEP

Construction of water processing facilities and equipment manufacturing plants

At this stage, we design, and coordinate the regulatory documentation, and build facilities and factories.

The purpose of this step is to build facilities and factories.

Step Status: IN QUEUE

5 STEP

Launching objects and integration with the VODPROM platform

At this stage, commissioning, personnel training and bringing facilities to the required level of work are carried out.

Integration with the VODPROM platform is also performed (both with software and with hardware for software).

The purpose of this step is integration with the VODPROM platform.

Step Status: IN QUEUE

Digitization and decentralization is the digitization of housing and communal services industry and the creation of a mechanism for the relationship between the society-state-corporations (the VODPROM platform creation).

Here we have also identified five main steps for the implementation of this part of the project:

1 STEP

Creating a working group and forming a concept

The purpose of this step is to create a highly qualified team and approve the platform concept.

Step Status: COMPLETED

2 STEP

Platform MVP

The purpose of this step is to translate the platform concept into a program code and coordinate it with the society.

Step Status: IN PROGRESS

3 STEP

Platform Beta version

The purpose of this step is to create a working version of the platform after the previous approval of the MVP with the society.

Step Status: IN QUEUE

4 STEP

The first general vote on next region selection

The purpose of this step is to hold general voting among the VOD token holders to select the next region to enter and integrate into the ecosystem.

Step Status: IN QUEUE

5 STEP

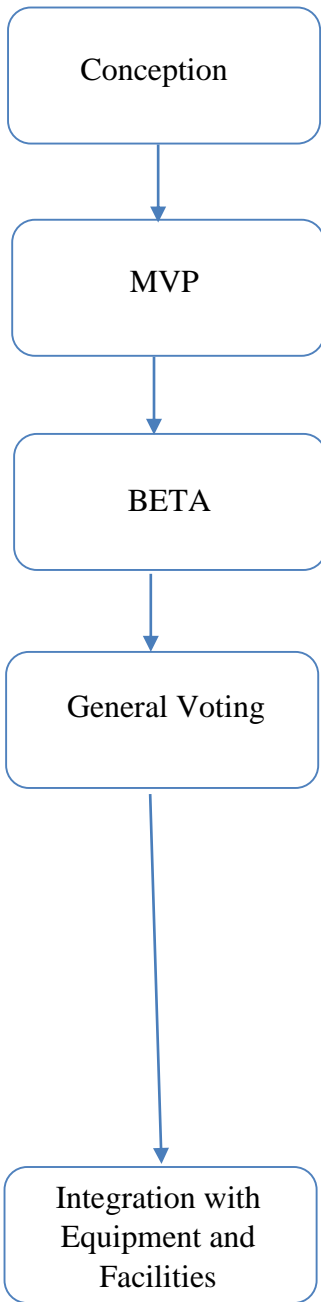

Manufacturing equipment for the platform integrating with the objects

The purpose of this step is to bring together all the elements: software, unique hardware for software and all the objects of the regions. Launching the second phase of the VODPROM platform.

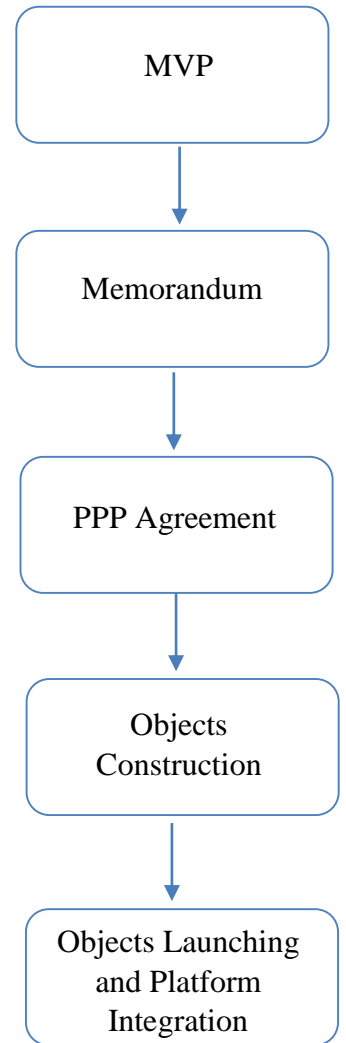

Step Status: IN QUEUE

Schematically, the project implementation is as follows:

Digitization and decentralization

Construction and modernization

REGION No. 2
